Dear Keith,

Pancreatic cancer is predicted to be the second most deadly cancer in the United States by 2020. Yet, it is ranked eighth for receipt of federal research dollars. Sky Foundation helps fill this gap by awarding seed-money grants to scientists and clinicians in the United States who are pursuing research of great promise in the areas of early detection, prevention and treatment.

Pancreatic cancer is known as a silent killer with few symptoms. All stages combined, the one-year relative survival rate is 20 percent and the five-year rate is 7 percent. As a 10 year survivor of this dreaded disease I am optimistic that through awareness and outreach we will begin to turn around these daunting statistics.

With your sense of compassion and urgency for change we believe your work will speak volumes to the public. We are grateful to be involved in the production of "Those on the Frontlines of Cancer".

Best Regards,

Sheila Sky Kasselmann
Founder & Pancreatic Cancer Survivor
